Inspection
Type: ROLITINE INSPECTION
Date: NOV-29-2004

2.40 (b x 3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINAF CARE (DEALERS AND EXHIBITORS).

Section 2.40(b)(3) Veterinary care: Each deater shall establish and maintain programs of veterinary care that include daily observation of all animals to assess their health and well-being with a mechanism for direct and frequent communication with the attending veterinarian.

There were six dead hemsters found in different enclosures housing other hamsters. These hemsters had been dead for awhile. This inspection was conducted in the mid to take afternoon. The dead hamsters should have been observed by the facility personnel and removed from the enclosures.

Conscied during the inspection. The dead hamsiers were removed at the time of the inspection.

2.75 (5 X 1) REPEAT NO

RECORDS: DEALERS AND EXMIDITORS.

Section 2.75(b)(1) Records: Every device shall keep records of animals held that include animals disposed of by the dealer and any offspring form of any animal under his possession.

The licensee is recording animal births and wouned on cage certie for some of the dwarf hamsters. However, records are not kept for the regular hamsters for births and deaths. During this inspection many harmsters had belies and six dead hamsters were found. Records also need to be kept for animal deaths on animals bought for recalls.

3.25 (c)

FACILITIES, GENERAL

Section 3.25(b) Storage: Supplies of food and bedding shall in facilities which adequately protect such supplies against spollage or deterioration and infestation or contamination by vermin. Food supplies shall be stored in containers with tightly litting little.

There was a seeled beg and an open bag of guines pig food stored on the dirty floor of the animal room. Open bags of food need to be stored in a container with a lightly fitting lid. The unopened begs of food need to be stored up off the floor. The ficensee has a storage area with pallets. The miscellaneous clutter needs to be removed from the storage area to prevent contamination of the food and bedding.

Correct by December 7, 2004.

3.28 (CX 1 X H)

3.28 (c X 2 X m)

PRIMARY ENCLOSURES

Section 3.28(c)(1)(ii) Space requirements: Each guines pig shall be provided a minimum amount of floor space in any primary enclosure as follows: wearing to 350 grams each need at least 60 square inches of floor space and guines pigs over 350 grams each need 101 square inches of floor space.

Guinea pigs are being housed in plastic tubs that provide about 504 square inches of floor space. The tubs have one or two large dishes that are 10.5 inches in clameter and each take about 36.5 square inches of floor space. The floor space occupied by the dishes is subtracted from the available floor space for the guinea pigs.

Two tubs housed guines pigs that looked under 350 grams: one with 13 guines pigs and one dish that should have housed only 7 guines pigs and one with 15 guines pigs and two dishes that should have housed only 5 guines pigs. One tub with one dish housed 11 guines pigs and at least four of the guines pigs looked over 350 grams. This enclosure should only have housed the four guines pigs over 350 grams. Each guines pig needs at least its minimum amount of floor space in the primary enclosure to provide for its well-being.

Correct by December 7, 2004.

Section 3.25(c)(2)(iii) Space requirements: Each harmster shall be provided a minimum amount of floor space in any primary enclosure as follows: harmsters weighing less than 60 grams (2.1 punces) need at least 10 square inches of floor space.

Two enclosures that provided 144.5 square inches of floor space (8.5 inches x 17 inches) housed 22 and 24 newly weared Russian dwarf hamsters. This size enclosure can only house 14 hamsters weighing less than 2.1 ources. Corrected during the inspection. Hamsters were moved to additional enclosures.

3,30

WATERING.

Section 3.30 Watering: All watering receptacles shall be sanitized when dirty: Provided, however, That such receptacles shall be sanitized at least once every 2 weeks.

There were 7 enclosures with Chinese dwarf hamsters and 8 enclosures with Russian dwarf hamsters that had green algae growing in the water bottles. These hamsters need clean water bottles.

Correct by December 1, 2004.

3.31 (a X 1)

3.31 (b)

REPEAT NO

SANITATION.

Section 3.31(a)(1) Cleaning of primary enclosures: Primary enclosures shall be cleaned and sanitized often enough to prevent an accumulation of excrete or debrie.

MELLE 7117 cappt id 167713 Inso id 25477 sitm_id

There were 8 excessively wet and solled enclosures housing hamsters. The bedding was wet and caked together with food and fecal residue. The licensee said these enclosures were scheduled to be cleaned today. Hemsters need to be provided enclosures with clean dry hedding. Corrected during the inspection.

Section 3.91(b) Housekeeping: Premises shall be kept clean to facilitate the prescribed husbandry practices set forth in this subsection.

- (1) The tags of the old animal room still has split bedding and animal waste. There are now miscellaneous items accumulating around the food and bedding storage area.
- (2) The new hamster breeding room needs covers for the lights, covers over the outlets, and the area around the air conditioner seated.

The old animal room needs a good cleaning and the new harrster room needs to be finished.

3.53 (c (2)

PRIMARY ENCLOSURES.

Section 3.53(c) Space requirements: Each weared rebbit weighing less than 2 kilograms (4.4 pounds) housed in a primary anciosure shall be provided at least "..." square feet of floor space, exclusive of the floor space taken up by food and water receptacies.

The rabbits are housed in wire enclosures that provide 6 square feet of floor space. One enclosure housed 7 rabbits and one enclosure housed 5 rabbits. These enclosures only provide space for up to 4 rabbits weighing less then 4.4 pounds. Each rabbit needs at least its minimum amount of floor space in the primary enclosure to provide for its well-being. Correct by December 7, 2004.

3 128

SPACE REQUIREMENTS.

Section 3.128 Space requirements: Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement.

One adult ferret and three adult chinchilles were housed in enclosures that were only 8 inches in height. These animals did not have sufficient room to stand up on their hind legs. The ferret also did not have room to sit up. These entends need enclosures that provide sufficient height for them to make normal postural adjustments. Correct by December 7, 2004.

Note: Discussed the possible resith problem resulting from housing guines pigs and rabbits in the same room.

Note new regulation effective August 13, 2004: Section 2.132(d) No dealer or exhibitor shall knowingly obtain any dog, cat, or other enimal from any person who is required to be ilcensed but who does not hold a current, valid, and unsuspended ficense.
